Miscellaneous

- save_from_claudes_fuckup/: 14 files ignored, top level only. The only rule that is neither a macro rule nor a generated-file rule.
- Dormant rules (match nothing today): .DS_Store, pex_*.tcl, *.pyc (shadowed by __pycache__/.). *.ext only matters inside runs/, where runs/ wins.
- Untracked and not ignored: Makefile.bak, HANDOVER_xschem_makefile_lvs_and_chatlog_integrity.md, macros/slot/.../slot.klay_slot_full.lyrdb. The last two should be committed, not ignored.
- The inverter's CACE and schematic rules are purely preventive. Only OgueyAebischerBias has CACE output on disk: 14,299 of the 16,069 ignored files.
